## **SESSION SYNOPSIS**

### **Dear Mum & Dad it's nice here**

This session investigates the experiences of evacuees during WW2. During the session your group will investigate what an evacuee may have faced and felt away from home, through object handling, discussion, poetry writing, and drama.

### **What do you want a medal?**

This session introduces the concepts around medal giving. Your children will investigate to whom and why an award should be given after considering the story of a Cranwell recipient of a gallantry medal. They will discuss the design of medals after close observation and handling of replica gallantry medals, and finally they will design their own medal and have the opportunity to 'show and tell' the rest of the group about their design.

### **Why is this difficult**

This session investigates the issues experienced by injured bomber air crews and plastic surgery undertaken at Rauceby Hospital during WW2, through role play and telegram composition.

### **This goes really fast**

This session introduces aircraft design and technology to your group. They will have the opportunity for a close inspection of a real aircraft and a discussion on how and why it flies and also introduces the theories local famous scientists Isaac Newton and Frank Whittle. These theories are then put in to practice when the children undertake an experiment.

### **Can I park here?**

This is an introduction to the jobs of a Marshaller and a Pilot and how and why they use non-verbal communication. The initial discussion is followed by a practical experience to learn the basic command signals used on a modern day airfield. Finally the group put this into practice by taking the roles of a Marshaller and Pilot and try to "park a plane" whilst avoiding obstacles and communicating by signals only.

### **What's that tapping?**

This session explores non-verbal communication by using Morse code and Semaphore. Your pupils will learn about this historic form of communication and its modern applications. They will also have the chance to code and decode Morse messages and send a simple message by Semaphore.

**TO DISCUSS AVAILIBILTY AND BOOK OR IF YOU HAVE ANY  
QUESTIONS**
